## PROFESSIONAL SUMMARY

Senior Business Intelligence Engineer with 6+ years of experience translating complex data into strategic business solutions. Proven track record of owning entire analytical pipelines, from scalable data warehousing and multi-tier Medallion architectures to executive-level business dashboards. Skilled in robust dimensional data modeling, implementing end-to-end data quality frameworks, and leveraging agentic AI tools like Claude Code to accelerate pipeline development and boost developer productivity. Adept at bridging the gap between technical infrastructure and stakeholder requirements to drive data accuracy and accessibility across the organization.

## SKILLS

- ETL Data Pipeline Design Development
- Data integration and transformation
- Cloud-based ETL tools (e.g., DBT, AWS Glue, Spark/PySpark)
- Data warehousing (e.g. AWS Redshift, Snowflake, Databricks)
- Data warehouse design and implementation
- Data modeling and mapping
- Scripting languages (e.g., Python, Shell)
- Tableau, Power BI, Looker Studio, Streamlit
- Data quality management
- CI/CD Deployment Pipelines
- SQL and database programming
- Version control systems (e.g., Git)
- Claude Code, Agentic Coding Workflows
- Statistical Analysis - Black Belt Six Sigma

## EXPERIENCE

Business Intelligence Engineer, Data Engineering  
Amazon | Palo Alto, CA

October 2024 - Current

- Integrated Claude Code into local development environments to automate boilerplate Python scripting and complex SQL syntax generation, accelerating developer velocity and reducing pipeline development-to-production cycles by 35%.
- Architected and implemented modular ETL pipelines using a Medallion Architecture (Bronze, Silver, Gold stages) to streamline raw data processing into high-performance analytical layers.
- Designed and optimized dimensional data models in Redshift, utilizing star schemas to support executive reporting and drastically improving query execution times.
- Engineered a serverless data architecture using AWS S3, Glue, and Athena that automated data workflows, reducing processing time by 60% and empowering senior leadership with real-time, self-service analytics to identify operational anomalies.
- Developed a PySpark data quality testing framework with Great Expectations, establishing automated risk controls and programmatic anomaly detection that reduced reporting defects by 90%.
- Led the migration of legacy reporting systems to AWS cloud infrastructure, achieving 99.9% system availability and a 50% cost reduction.
- Mentored 3 junior BIEs/DEs on AWS best practices and BI development standards, accelerating team delivery velocity and technical excellence.

Data Engineer - Analytics  
Meta | Sunnyvale, CA

September 2022 - October 2024

- Drove a 25% reduction in ETL processing time and overhead through the design and implementation of cloud-based data pipelines in AWS, Snowflake and DBT.
- Designed and developed a highly scalable data model and data warehouse using Snowflake, resulting in a 40% improvement in data processing speed and a 25% reduction in storage costs.
- Analyzed source data to identify data quality issues and developed strategies to address them, resulting in a 30% reduction in data errors and inconsistencies.
- Collaborated with cross-functional teams to develop data dictionaries and data standards, ensuring data consistency and facilitating effective communication across the organization.
- Set up performance monitoring and automated reporting for data integration processes, enabling executives to quickly review data and identify urgent issues via Tableau, Power BI, or Looker Studio.

Analytics Engineer - Cell Manufacturing  
Tesla | Fremont, CA

April 2020 - September 2022

- Built and maintained batch data pipelines, driving an increase in monthly yield by 30%
- Initiated and maintained automated solutions for ETL and data management that eliminated manual intervention and achieved 75% data automation.
- Established and maintained data quality processes to ensure data accuracy and integrity, resulting in a 20% reduction in data errors and inconsistencies.
- Implemented an OLAP cube and semantic layer with over 98% accuracy and reduction in time requirements by 75%
- Optimized replication and data capture processes, resulting in a 50% reduction in data duplication.

Junior Data Engineer  
Stantec Inc. | San Jose, CA

July 2019 - May 2020

- Automated data integration processes increase efficiency by 25%, providing organization with the ability to effectively track and analyze process transactions data.
- Analyzed source data to identify data quality issues and developed strategies to address them, resulting in a 30% reduction in data errors and inconsistencies.
- Developed and maintained data models to support data warehouse (snowflake) and reporting requirements, resulting in a 20% improvement in data accessibility and usability.

Data Analyst Intern  
Western Digital | San Jose, CA

June 2018 - October 2018

- Conducted data cleaning and preparation tasks in both SQL and Python
- Collaborated with data engineers to develop data pipelines to improve data quality and accessibility

## EDUCATION

|                                                                                                     |              |
|-----------------------------------------------------------------------------------------------------|--------------|
| MSc. in Analytics - ETL Developer and Analytics<br>Georgia Institute of Technology, CA              | January 2022 |
| BSc. in Chemical Engineering - Minor in Computer Science<br>San Jose State University, San Jose, CA | May 2019     |

## CERTIFICATIONS

|                                                                                      |          |
